PRODUCT INFORMATION SHEET

# CENTRALIZED REMOTE MONITORING AND PLAYOUT

**iSQ**  
CUEBOARD

---

## CENTRALIZED PLAYOUT CONTROL

In today's fast-paced broadcast environment simplified playout operation is critical. iSQ, ChyronHego's Intelligent Sequencer, allows a single user – when connected to a CAMIO server – to control multiple Lyric playout or XClyps channels from a single work surface. As a single point of control, iSQ's flexible architecture enables the consolidation of multiple independent channels represented as individual playlists.

## INTUITIVE GUI

ChyronHego understands that every control environment is different. iSQ playlists are user-definable. Customize iSQ to show only the information you need to see in a clear, concise format. Viewing thumbnail images of all the messages in the playlist are configurable, as are screen layouts showing Preview and Air outputs or just the preview output at the top of each playlist.

Stories are easily identified with userselected alternating colors – enabling the user to see at a glance how many objects are left in a story. Specialized production skills are not required to use iSQ. While production personnel will appreciate iSQ's simple yet powerful interface, anyone can open playlists and execute them to air which reduces the need for specially trained graphics staff. With iSQ, you can produce a graphics-intensive show, while reducing operating expenses

iSQ's Deficient Asset Indicator gives your operators complete confidence that the graphics are ready for air. This indicator appears in the playlist any time an asset is not present on your output device. This is particularly useful when working with an order management solution. One quick glance will assure your staff that all graphics are complete and ready to be aired.

## CONTROL AT YOUR FINGERTIPS

Included in your purchase of iSQ is the CueBoard, a dedicated keyboard (USB or PS/2) you can use for the most common iSQ functions supporting up to 4 channels of graphics output. Dedicated buttons are clearly labeled and logically positioned to allow for rapid on-air use. The CueBoard also includes unused keys, which can be easily programmed to provide functions unique to your workflow.

Add an additional CueBoard to allow control of up to 8 channels of graphics output from a single work surface.

## ADVANCED FUNCTIONALITY

Up to 10 Lyric Macros can also be configured to be executed directly from the iSQ interface. This allows for extensive customization of playout of Lyric messages and effects.

An optional GPI interface allows iSQ playlists to be triggered directly via your Switcher's macro. This allows for a more flexible production and reduces the number of staff required.

# KEY FEATURES

- **Control multiple ChyronHego Lyric or XClyps channels simultaneously from a single interface.**

Easily consolidate multiple independent channels and view them as playlists.

- **Multiple rundowns can be loaded simultaneously.**

Back-to-back shows can be monitored and executed without closing the current rundown.

- **ChyronHego's customizable CueBoard puts immediate control of any graphic in any playlist at your fingertips.**

Fast and accurate graphics playback is assured.

- **iSQ's Deficient Asset Indicator clearly indicates if any assets are missing prior to going to air.**

With just a glance, operators will know assets are missing and can react before going to air.
